

IN THE CLAIMS:

1. (Cancelled)

2. (Cancelled)

3. (Currently Amended) A surgical kit for use in spinal surgery, comprising:
~~a spinal implant components comprising adapted for engagement between first and second vertebrae, wherein said spinal implant comprises~~ an elongate spinal plate member and a number of bone ~~anchors~~ screws adapted to secure said elongate spinal plate member to ~~the~~ first and second vertebrae;

instrumentation adapted for use in association with the spinal surgery and comprising a driver including an end portion configured to drivingly engage said bone screws into engagement with vertebral bone; and

packaging comprising a common container, adapted to integrally contain and maintain said spinal implant components and said instrumentation integrally contained and sealed within said common container to maintain said spinal implant assembly and said instrumentation in a common container in a sterilized condition prior to the spinal surgery.

4. (Cancelled)

5. (Currently Amended) The surgical kit of claim 3, wherein said spinal implant components further comprises an interbody implant adapted for disposition within an intervertebral space between the first and second vertebrae.

6. (Original) The surgical kit of claim 5, further comprising a bone growth promoting substance for disposition between the first and second vertebrae to facilitate fusion.

7. (Previously Presented) The surgical kit of claim 3, wherein said instrumentation is

designed for planned disposal.

8. (Previously Presented) The surgical kit of claim 3, wherein said instrumentation is designed for use in association with a limited number of spinal surgeries.

9. (Original) The surgical kit of claim 8, wherein said instrumentation is designed for use in association with a single spinal surgery.

10. (Withdrawn/Currently Amended) ~~A surgical kit for use in spinal surgery, comprising:~~
~~a spinal implant;~~
~~instrumentation adapted for use in association with the spinal surgery; and~~
~~packaging adapted to contain and maintain said spinal implant and said instrumentation in a sterilized condition prior to the spinal surgery; and~~ The surgical kit of claim 3, wherein at least a portion of said instrumentation is subject to degradation upon exposure to a sterilization procedure.

11. (Withdrawn) The surgical kit of claim 10, wherein said degradation comprises deformation.

12. (Withdrawn) The surgical kit of claim 10, wherein said degradation comprises discoloration.

13. (Withdrawn) The surgical kit of claim 10, wherein said degradation occurs gradually upon exposure to multiple sterilization procedures.

14. (Withdrawn) The surgical kit of claim 10, wherein said degradation occurs immediately upon exposure to a single sterilization procedure.

15. (Withdrawn) The surgical kit of claim 10, wherein said sterilization procedure comprises autoclaving.

16. (Withdrawn) The surgical kit of claim 10, wherein said degradation causes said instrumentation to become substantially inoperative.

17. (Currently Amended) The surgical kit of claim 3, wherein said ~~instrumentation~~ driver comprises a first portion and a second portion, said first portion being selectively engageable with said second portion, one of said first and second portions including ~~an~~ said end portion adapted to drivingly engage said bone ~~anchors~~ screws into engagement with vertebral bone.

18. (Withdrawn/Currently Amended) ~~A surgical kit for use in spinal surgery, comprising:~~

~~a spinal implant;~~
~~instrumentation adapted for use in association with the spinal surgery; and~~
~~packaging adapted to contain and maintain said spinal implant and said instrumentation in a sterilized condition prior to the spinal surgery; and~~ The surgical kit of claim 17, wherein said ~~instrumentation~~ driver comprises a first portion and a second portion, said first portion ~~of said instrumentation~~ comprising a shaft, said second portion ~~of said instrumentation~~ comprising a handle, said shaft including opposite first and second end portions, said first and second end portions being reversible relative to said handle, said first end portion adapted to perform a first function associated with the spinal surgery, said second end portion adapted to perform a second function associated with the spinal surgery.

19. (Withdrawn/Currently Amended) The surgical kit of claim 18, wherein said first end portion comprises a first tip configuration adapted for engagement with a first element associated with said spinal implant components, said second end portion comprising a second tip configuration adapted to for engagement with a second element associated with said spinal

implant components.

20. (Previously Presented) The surgical kit of claim 17, wherein said instrumentation is configured to perform multiple functions associated with the spinal surgery.

21. (Cancelled)

22. (Currently Amended) The surgical kit of claim 3, wherein said ~~packaging~~ common container includes a plurality of compartments sized to receive respective components of said spinal implant components and said instrumentation therein.

23. (Currently Amended) The surgical kit of claim 24, wherein said inner container and said outer container of said packaging ~~is~~ are each formed of a material capable of providing direct visualization of said spinal implant components and said instrumentation contained therein.

24. (Currently Amended) The surgical kit of claim 3, wherein said packaging comprises an inner container and outer container, said inner container comprising said common container adapted to which contains and maintains said spinal implant components and said instrumentation in said sterilized condition, said inner container sealed within said outer container to ~~contain and~~ maintain said inner container in a sterilized condition prior to the spinal surgery.

25. (Currently Amended) The surgical kit of claim 24, wherein said outer container includes a first removable seal to provide selective access to said inner container, said inner container including a second removable seal to provide selective access to said spinal implant components and said instrumentation contained therein.

26. (Currently Amended) The surgical kit of claim 3, further comprising a template

including a number of images corresponding to one or more select sizes of said spinal ~~implant~~
plate member, one of said template images corresponding to a size of said spinal ~~implant~~ plate
member included with the surgical kit.

27. (Withdrawn/Currently Amended) ~~A surgical kit for use in spinal surgery,~~
~~comprising:~~
~~a spinal implant;~~
~~instrumentation adapted for use in association with the spinal surgery;~~
~~a template including a number of images corresponding to one or more select sizes of~~
~~said spinal implant, one of said template images corresponding to a size of said spinal implant~~
~~included with the surgical kit; and~~
~~packaging adapted to contain and maintain said spinal implant and said instrumentation~~
~~in a sterilized condition prior to the spinal surgery; and~~ The surgical kit of claim 26, wherein said
template is provided external to said packaging to provide access to said template without
compromising said sterilized condition of said spinal implant components and said
instrumentation.

28. (Withdrawn) The surgical kit of claim 27, wherein said template includes an
indication of a magnification factor associated with said template images.

29. (Cancelled)

30. (Withdrawn) A surgical kit for use in spinal surgery, comprising:
a surgical equipment set, including:
a spinal plate;
a number of bone screws adapted to secure said spinal plate to first and second
vertebrae; and
a driver instrument adapted to drive said bone screws into engagement with
vertebral bone; and

packaging adapted to integrally contain and maintain said surgical equipment set in a common container in a sterilized condition prior to the spinal surgery.

31. (Withdrawn) The surgical kit of claim 30, wherein said bone screws are self-cutting bone screws.

32. (Cancelled)

33. (Withdrawn) The surgical kit of claim 30, wherein said surgical equipment set includes an interbody implant adapted for disposition within an intervertebral space between the first and second vertebrae.

34. (Withdrawn) The surgical kit of claim 30, wherein said driver instrument is designed for planned disposal.

35. (Withdrawn) The surgical kit of claim 30, wherein at least a portion of the driver instrument is subject to degradation upon exposure to a sterilization procedure.

36. (Withdrawn) The surgical kit of claim 30, wherein said driver instrument extends generally along a longitudinal axis and comprises a shaft portion and a handle portion, said handle portion including a first portion rotatably coupled to a second portion to provide relative rotational movement therebetween about the longitudinal axis.

37. (Withdrawn) The surgical kit of claim 30, wherein said driver instrument comprises a shaft portion and a handle portion, said shaft portion being selectively engagable with said handle portion.

38. (Withdrawn) The surgical kit of claim 37, wherein said shaft portion includes opposite first and second end portions, said first and second end portions being reversible

relative to said handle portion, said first end portion comprises a first tip configuration adapted for engagement with said bone screws, said second end portion comprising a second tip configuration adapted to for engagement with a second element associated with said spinal plate.

39. (Withdrawn) The surgical kit of claim 30, further comprising a template including a number of images corresponding to one or more select sizes of said spinal plate, one of said template images corresponding to a size of said spinal plate included with the surgical kit, said template being provided external to said packaging to provide access to said template without compromising said sterilized condition of said surgical equipment set.

40.-55. (Cancelled)

56. (Withdrawn) The surgical kit of claim 10, wherein said at least a portion of said instrumentation subject to degradation upon exposure to said sterilization procedure is formed of a metallic material.

57. (Withdrawn) The surgical kit of claim 10, wherein said packaging integrally contains and maintains said spinal implant and said instrumentation in a common container in a sterilized condition prior to the spinal surgery.

58. (Withdrawn) The surgical kit of claim 10, wherein said spinal implant comprises an elongate member and a number of bone anchors adapted to secure said elongate member to first and second vertebrae.

59. (Withdrawn) The surgical kit of claim 10, wherein said packaging comprises an inner container and outer container, said inner container adapted to contain and maintain said spinal implant and said instrumentation in said sterilized condition, said outer container adapted to contain and maintain said inner container in a sterilized condition prior to the spinal surgery.

60. (Withdrawn) The surgical kit of claim 18, wherein at least one of said first and second portions of said instrumentation is subject to degradation upon exposure to a sterilization procedure.

61. (Withdrawn) The surgical kit of claim 60, wherein said degradation comprises deformation.

62. (Withdrawn) The surgical kit of claim 60, wherein said degradation comprises discoloration.

63. (Withdrawn) The surgical kit of claim 60, wherein said degradation occurs gradually upon exposure to multiple sterilization procedures.

64. (Withdrawn) The surgical kit of claim 60, wherein said degradation occurs immediately upon exposure to a single sterilization procedure.

65. (Withdrawn) The surgical kit of claim 60, wherein said degradation causes said instrumentation to become substantially inoperative.

66. (Withdrawn) The surgical kit of claim 18, wherein said packaging integrally contains and maintains said spinal implant and said instrumentation in a common container in a sterilized condition prior to the spinal surgery.

67. (Withdrawn) The surgical kit of claim 18, wherein said spinal implant comprises an elongate member and a number of bone anchors adapted to secure said elongate member to first and second vertebrae.

68. (Withdrawn) The surgical kit of claim 18, wherein said packaging comprises an inner container and outer container, said inner container adapted to contain and maintain said

spinal implant and said instrumentation in said sterilized condition, said outer container adapted to contain and maintain said inner container in a sterilized condition prior to the spinal surgery.

69. (Withdrawn) The surgical kit of claim 68, wherein said outer container includes a first removable seal to provide selective access to said inner container, said inner container including a second removable seal to provide selective access to said spinal implant and said instrumentation contained therein.

70. (Withdrawn) The surgical kit of claim 27, wherein said packaging integrally contains and maintains said spinal implant and said instrumentation in a common container in a sterilized condition prior to the spinal surgery.

71. (Withdrawn) The surgical kit of claim 27, wherein said spinal implant comprises an elongate member and a number of bone anchors adapted to secure said elongate member to first and second vertebrae.

72. (Withdrawn) The surgical kit of claim 27, wherein said packaging comprises an inner container and outer container, said inner container adapted to contain and maintain said spinal implant and said instrumentation in said sterilized condition, said outer container adapted to contain and maintain said inner container in a sterilized condition prior to the spinal surgery.
